1. AGC 150 ATS

1.1 About

The AGC 150 Automatic Transfer Switch (ATS) controller can automatically transfer the power supply from its primary source to a backup source when it detects a failure or outage. The controller can handle all types of power sources. The ATS can control up to three breakers, which means that you can use it in a wide range of emergency power solutions.

The AGC 150 is a compact, all-in-one controller. Each AGC 150 contains all necessary 3-phase measuring circuits.

The values and alarms are shown on the LCD display screen, which is sunlight-readable. Operators can easily control the gensets and breakers from the display units. Alternatively, use the communication options to connect to an HMI/SCADA system.

1.1.1 Software packages

You can choose the **Stand-alone** and **Core** software packages.

- See LEDs light up to show statuses and/or alarms.

4.4 Remote display: AGC 150

The remote display is an AGC 150 that only has a power supply and an Ethernet connection to an AGC 150 controller. The remote display allows the operator to see the controller's operating data, as well as operate the controller remotely.

See www.deif.com/products/agc-150-remote-display

4.5 Other equipment

DEIF has a wide variety of other equipment that is compatible. This includes synchrosopes, meters, transducers, current transformers, power supplies, and battery chargers. See www.deif.com
