

About ASC 150 Solar

Use the **ASC 150 Solar** as a **single controller** to add PV power to an existing site, or with other DEIF controllers in a **power/energy management system** (PMS). The ASC 150 Solar controller optimises the PV power, to **save fuel** and maximise green penetration.

Each controller controls and protects a photovoltaic (PV) system with up to **32 inverters**. The controller is **plug-and-play**, and **easy to customise** (with the user-friendly M-Logic tool). You can **easily scale up** from a single controller, to a PMS with a variety of controllers and up to 16 solar controllers.

Solar features

Spinning reserve

- If there is a mains connection, the power management system can start and stop the genset(s).
- The spinning reserve can be a percentage of the PV power production or the mains import.

Ideal for self-consumption applications

- The ASC 150 Solar can feed surplus PV energy to the grid and generate profit in accordance with grid operator feed-in tariffs.
- Alternatively, the controller can regulate the PV production to match the self-consumption, thereby preventing any feed-in of PV power to the grid.

	Extended	Premium
Number of inverters	16	32
Photovoltaic breaker (PVB) control	•	•
Power management	•	•
Irradiance sensor	•	•
Weather station		•
Reactive power control		•

	Extended	Premium
Inverter monitoring	•	•
Inverter start/stop logic	•	•
PV integration	•	•
Solar power load calculation	•	•
Ensure a minimum genset load	•	•
PV power counters (kWh)	•	•
Mains import/export power counters (kWh)	•	•

Single controller

- Useful for **rental** and **brownfield** applications
- Makes sure that there is a **minimum genset load**
- Requires **power measurement** and breaker feedback for other power sources
 - Only one source:** Can use the controller's 4th current measurement.
 - Multiple power sources:** Measurements from:
 - Genset controllers (DEIF or third parties)
 - Power meters
 - Transducers
- Power management communication is not required

Power management

- Automatically maximises PV power
- Automatically starts and stops generators
 - Load-dependent start and stop
- Automatically closes and opens breakers
- Optimises the fuel consumption
 - Asymmetric load sharing possible
- Balances the loads in the system
- Uses the plant logic
- Makes sure that the system is safe

Off-grid applications

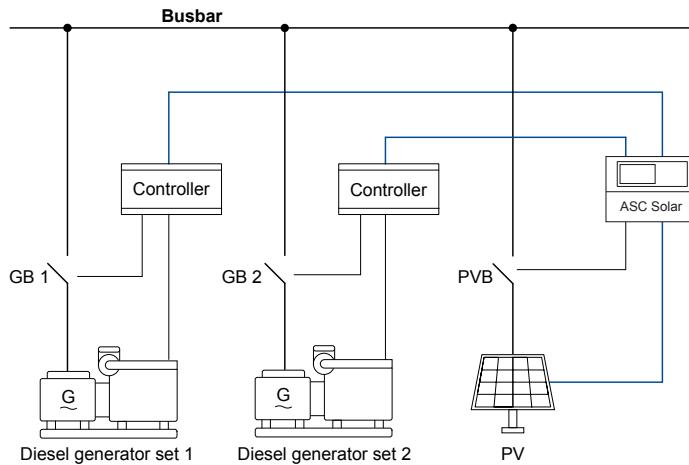

- With a genset:** The controller uses the genset power measurements to calculate the set points for the PV power.
- With storage:** The controller combines the available PV power with the charge/discharge scheme to determine the set point for the PV power.

Grid-tied applications

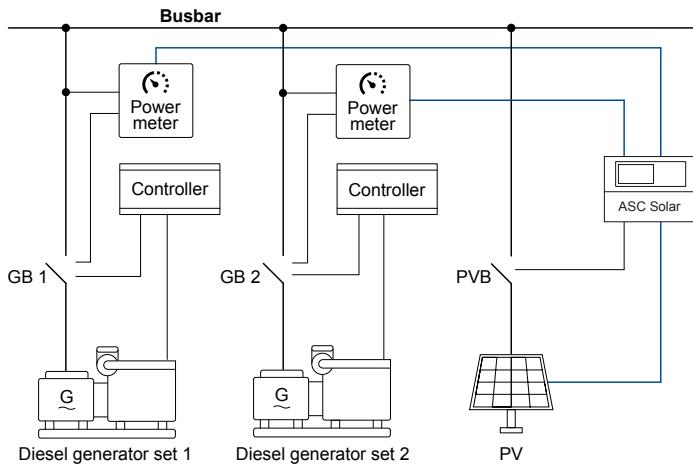

- Feed surplus PV energy to the grid
- Charge the energy storage system (ESS)
- Regulate PV production to match the self-consumption

Application examples

Single controller

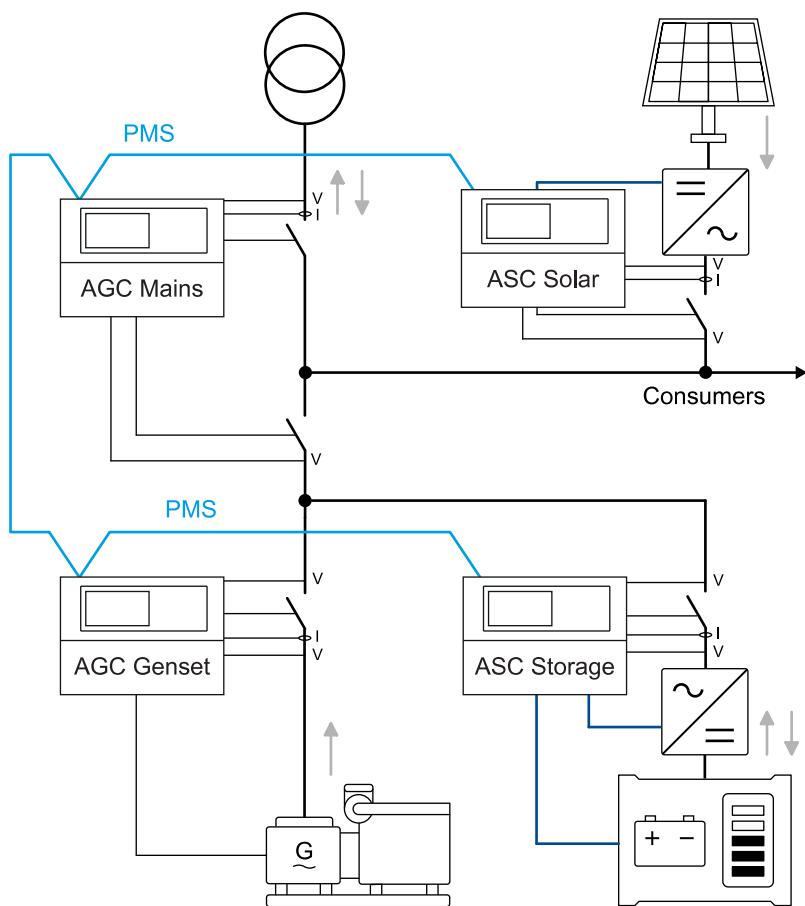

Power measurement from genset controllers

Power measurement from power meters

Maximum number of gensets for a single controller: 4 (Extended) or 16 (Premium)

Power management

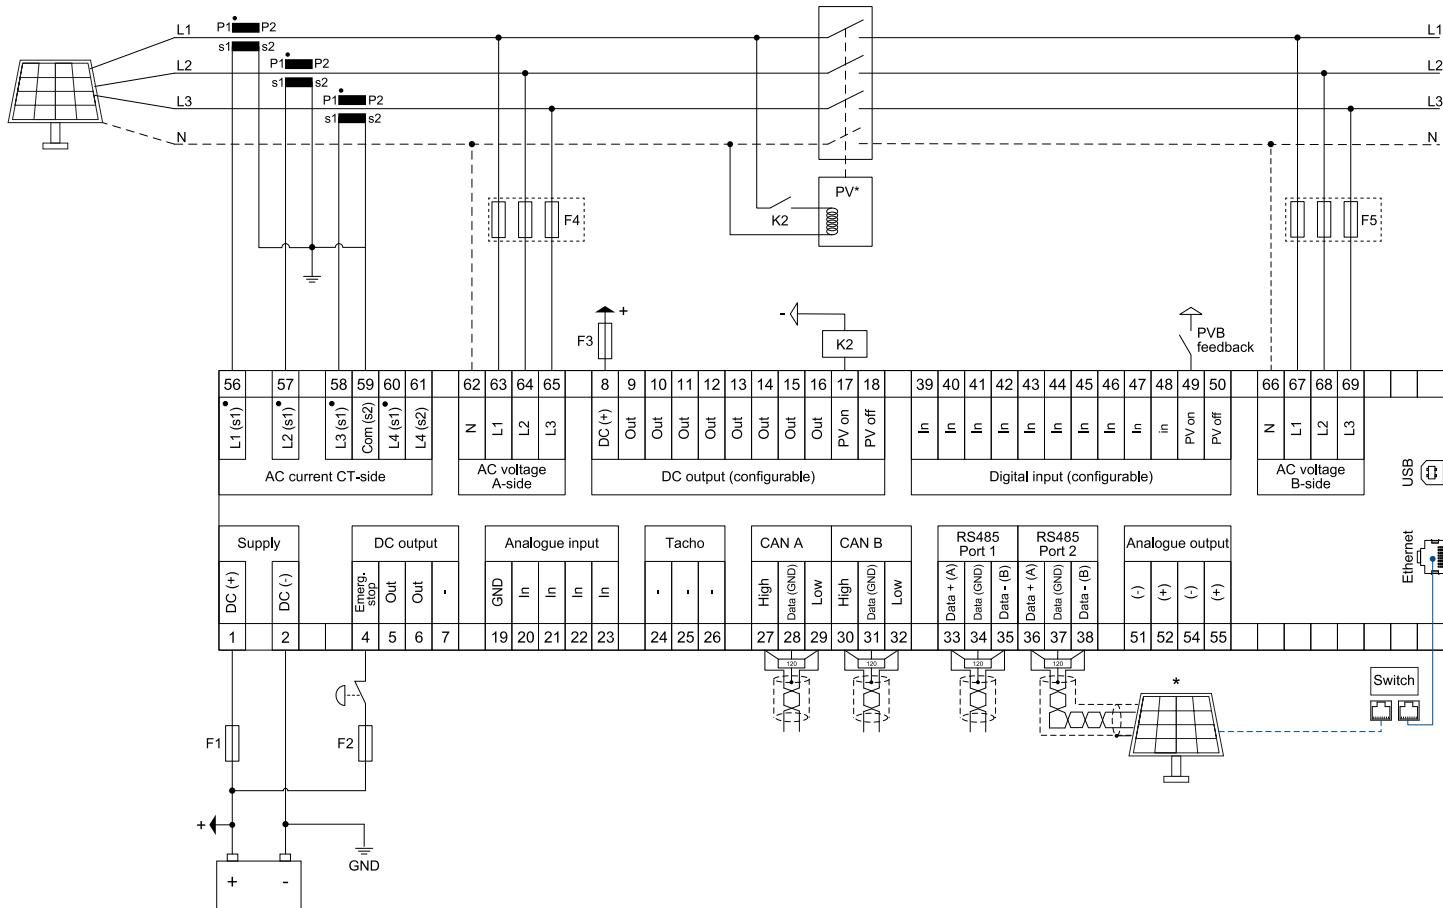

Maximum number of compatible controllers*

Generator controllers.....	32
Mains controllers.....	32
BTB controllers.....	8
Solar controllers.....	16
Storage (BESS) controllers.....	32
Load controllers.....	8

* All controllers must use DEIF power management.

Typical wiring

Communication

PV inverters

- Modbus RTU (RS-485)
- Modbus TCP (Ethernet)

Power meters

- Modbus RTU (RS-485)

Other DEIF controllers

- CAN bus
- Ethernet

Weather stations

- Modbus RTU (RS-485)

Compatibility

PV inverters

- Supports hundreds of PV inverter types
- Supports a wide range of manufacturers

Power meters

- Genset controllers (DEIF or third parties)
- Power meters
- Transducers

Weather stations and sensors

More information

See **DEIF hybrid controller compatibility** for all the compatible PV inverters, power meters, and weather stations.

AC measuring

- Voltage: 100 to 690 V phase-to-phase (10 to 135 %), $\pm 1\%$
- Current: -/1 A or -/5 A (2 to 300 %), $\pm 1\%$
- Frequency: 3.5 to 75 Hz
- Power: $\pm 1\%$

Power supply

- Nominal voltage: 12/24 V DC
- Operating range: 6.5 to 36 V DC
- Load dump protection: ISO16750-2
- Measuring range: 0 to 36 V DC

Inputs and outputs

- Digital inputs: 12 x (max. +36 V, min. -24 V)
- Digital outputs:
 - 2 x (15 A inrush, 3 A continuously)
 - 10 x (2 A inrush, 0.5 A continuously)
 - Common: 12/24 V DC
- 4 x analogue inputs
- 2 x analogue outputs
- CAN bus A and B
- RS-485 1 and 2
- RJ-45 Ethernet
- USB (service port)

Environment

- Operating temperature: -40 to +70 °C (-40 to +158 °F)
- Storage temperature: -40 to +85 °C (-40 to +185 °F)
- Altitude: 0 to 4000 m
- Humidity: 20/55 °C at 95 % RH
- Protection degree: IP65 in panel, IP20 on terminals
- Pollution degree 2
- Self-extinguishing plastic

Approvals

- CE
